OUR MISSION
The mission of St-Boniface Hospital Foundation is to raise funds to support excellence in health care and research at St-Boniface Hospital in a manner that embodies the legacy of the Grey Nuns.

OUR VISION
St-Boniface Hospital Foundation will be at the forefront of fund development in order to promote excellence in health care and research with a vision, shared by our donors and partners, of a healthier society.

MESSAGES OF HOPE AND HEALING …
A WORD FROM THE CHAIRMAN

As Chairman of St-Boniface Hospital Foundation’s Board of Directors, I am pleased to report on the Foundation’s 2011 activities. This past year marked an exciting milestone for us – our 40th anniversary. In 2010, our focus was to put the right people, programs and processes in place to initiate real growth and success. In 2011, all of these pieces began to come together. It’s just the beginning of what I envision to be some of St-Boniface Hospital Foundation’s most exciting years!

NEW PEOPLE AND PLACES:
In 2011, we welcomed new talent to our team: Louis St-Cyr, Vice President Development, Don Barnabé, Vice President Finance, Todd MacNeil, Director of Technology, and Heather Olynick, Development Coordinator. These new faces are part of a new organizational structure that will make our team more productive and more successful than ever before.

To accommodate our growing team, St-Boniface Hospital Foundation relocated within the Hospital to room C1026. This new space gives our staff more room to do what they do best: raise funds to support St-Boniface Hospital!

NEW PROGRAMS AND INITIATIVES:
St-Boniface Hospital Foundation has been a leader in fundraising for 40 years, having raised more than $160 million over four decades. In 2011, we embarked on new programs designed to keep us at the forefront of fundraising excellence. In October 2011, we proudly launched the Circle of Compassionate Care Program, designed to give grateful patients and their family members a way to say ‘thank you’ for the compassionate care they received at St-Boniface Hospital. We also laid the foundation for our first “family campaign,” building relationships among Hospital employees, our greatest potential advocates.

2011 FINANCIAL STEWARDSHIP:
Over the past five years, we have grown our funds by close to $8 million, from $21.9 million to $29.7 million. Our 2011 revenue was $8.9 million. For a detailed financial summary, please see page 28 and 29 of this annual report.

Inside this annual report, you will also read many wonderful stories of hope and healing – how our donors are making possible the many incredible innovations at St-Boniface Hospital.

On behalf of St-Boniface Hospital Foundation’s Board of Directors and staff, I extend my sincerest thanks for your continued confidence, commitment and support.

Together, we can ensure another 40 years of hope and healing, through compassionate patient care and innovative medical research, right here at St-Boniface Hospital.

Yours truly,
Aidan O’Brien
Chairman
St-Boniface Hospital Foundation
Board of Directors

St-Boniface Hospital Foundation staff believe so strongly in the organization’s mission that 100% of us are also donors!
MESSAGES OF HOPE AND HEALING …
A WORD FROM THE PRESIDENT & CEO

Our mission statement very appropriately states that we do what we do “in a manner that embodies the legacy of the Grey Nuns.” Our Foundation is celebrating its 40th anniversary in the 2011 edition of our annual report. This is a significant milestone. What a great opportunity to step back and take stock of all we have accomplished since our inception. We cannot do this without paying tribute to our Founders, the Grey Nuns of Montreal. What a legacy we have been entrusted with!

Since our Foundation was established in 1971, the centennial year of our Hospital, our current milestone coincides with the Hospital’s 140th anniversary. The leadership St-Boniface Hospital has exemplified in the last 140 years is no accident. When Sisters Valade, Lagrave, Coutlée and Lafrance left Montreal on April 24, 1844 in a canoe 40 ft. long and 5 ft. wide, their precarious 58-day journey was a great display of leadership. They also led the way when they immediately began to care for the sick and the needy. After 27 years of caring in the community, they also led the way with the establishment of a 4-bed hospital in their residence in 1871 – one year after Manitoba was admitted into confederation!

As the first hospital in Western Canada, we are not merely chronological leaders, but we are leaders in health care delivery, research and innovation. This includes the first open heart surgery in Manitoba, the first palliative care centre in a Canadian hospital setting, the first MRI in Manitoba, the first art gallery in a Canadian hospital and the first free-standing research centre in Canada.

St-Boniface Hospital also led the way when they established St-Boniface Hospital Foundation in 1971. Since then, the Foundation has raised more than $160 million to support the life changing care and innovative research that is delivered every day at the Hospital. As we celebrate our milestone, let’s take the time to recognize our founders. The best way to do that is to continue to lead through innovation, to deliver the best possible care, and to do so with the same compassion our founders so eloquently exemplified.

Sincerely,

Charles (Chuck) LaFlèche, CMA, FCMA
President & CEO
St-Boniface Hospital Foundation

SPECIAL THANK YOU!

After 15 years on St-Boniface Hospital Foundation’s Board of Directors, and six years as Chairman, 2011 marks Mr. Aidan O’Brien’s final year on the Board. He has led the Board of Directors with great passion and commitment, setting a great example for all of us. Under his direction, we have watched the Foundation grow and flourish.

As Chair of the $25 million HeartCare Campaign in 2004, Aidan played a key role in establishing St-Boniface Hospital as a centre of cardiac excellence. With his leadership, we honoured two International Award recipients, Sir Bob Geldof in 2008 and Steve Nash in 2011.

Aidan’s contributions to St-Boniface Hospital Foundation are immeasurable, and the impact his leadership has had on health care in Manitoba will be felt for generations to come.

On behalf of everyone at St-Boniface Hospital, I extend my sincerest thanks to Aidan.
40 YEARS
OF HOPE AND HEALING

2011 A MILESTONE YEAR FOR
ST-BONIFACE HOSPITAL FOUNDATION

Thanks to the support of our donors, St-Boniface Hospital Foundation has been enabling transformations in health care in Manitoba for more than 40 years.

Established in 1971, in celebration of St-Boniface Hospital’s centennial, St-Boniface Hospital Foundation was created to raise funds to support compassionate patient care and innovation in medical research. Today, we are as committed as ever to this cause.

We have donors like you to thank for our international reputation as leaders in medical research and innovative care. St-Boniface Hospital’s ability to improve the health of people in our community and worldwide is possible thanks to your support.

“Such strong community support over 40 years has made the difference between good and excellent health care,” says Dr. Michel Tétreault, President & CEO, St-Boniface Hospital. “Thanks to the Foundation we can take the steps needed to attempt to be extraordinary. They help us make our vision a reality.”

During the Foundation’s first year, $13,000 in grant funding was raised and distributed for research in various fields – since then, more than $160 million has been raised. These funds have been used to accomplish remarkable things.

In 1971, St-Boniface Hospital Foundation was established to support excellence in medical research at St-Boniface Hospital.

In 1987, we raised $19 million to establish the first free-standing research facility in Canada, St-Boniface Hospital Research.

We purchased the first Magnetic Resonance Imaging (MRI) unit in the province in 1990.

In 2000, we established a new Palliative Care Unit at the Hospital, dedicated to delivering compassion and dignity to those in their last stage of life.

OF HOPE AND HEALING
As we look back on the success of the past 40 years, we look forward to accomplishing even greater things in years to come. With the help of donors like YOU, St-Boniface Hospital will remain a leader in the promotion, support and advancement of patient care and medical research in Manitoba, and beyond.

In 2009, St-Boniface Hospital Foundation raised funds for the SPY Intra-Operative Imaging System, the first of its kind in Western Canada. This system helps doctors to confirm a successful bypass surgery.

In 2004, St-Boniface Hospital Foundation raised $25 million in 2004 to create a cardiac centre of excellence for Manitobans, which includes the I.H. Asper Clinical Research Institute and the Bergen Cardiac Care Centre.

In 2011, St-Boniface Hospital Foundation launched its first Mental Health Program fundraising campaign, with the goal of bringing innovative new treatments for anxiety and depression to Manitoba.

We opened the first hospital-based art gallery in Canada, the Buhler Gallery, in 2007, providing an oasis of hope and healing for staff, patients and their families.
With the help of its donors, St-Boniface Hospital Foundation has been supporting Lean transformation at St-Boniface Hospital since 2008. This funding supports process improvements, which ultimately lead to the delivery of better, more efficient and compassionate patient care.

"St-Boniface Hospital is a better place than it was three years ago," says Dr. Michel Tétreault, President and CEO, St-Boniface Hospital, on the Hospital’s efforts to improve patient care through Lean transformation.

St-Boniface Hospital began practicing Lean principles of management and process in 2008, and since then has directly engaged more than 900 people – patients, staff, physicians, community and business partners – in identifying waste in patient care processes, the Hospital’s supply chain and its financial and organizational processes. The results are happier patients, engaged staff and financial savings to the Hospital.

"When we introduced the concept of Lean transformation, we really felt we had no choice but to learn to do things differently. Patients were at risk, staff overworked and resources limited," says Dr. Tétreault. "We believe that the path we are on can only improve the patient’s experience and our organization as a whole."

"Results to date are promising. Patients tell us they are more satisfied with their overall care, and they are recovering more quickly. We also know that we are doing better at keeping them safe during their stay."

Dr. Tétreault attributes the Hospital’s success to its staff and physicians.

"Staff and physicians tell us that our combined efforts are making a difference in their ability to care for patients. They are coming forward with more ideas on where we can do better. I am proud of the 4,000 men and women who work at St-Boniface Hospital."

"There is still much to be done, and there will always be opportunities to improve on the way we work and care for patients, however, staff and physicians are very committed to transforming care," says Dr. Tétreault. "In the coming year, we will be spreading what we have learned to other parts of the Hospital and inviting more staff, physicians and patients to identify opportunities and help make St-Boniface Hospital an even better place."
TRANSFERRING CARDIAC PATIENTS SAFELY

Patients being transferred between Hospital departments are at an increased risk for harm. This is particularly true for patients transferring from the operating room to the Intensive Care Unit. Communication between the surgical team and the care team is critical to patient safety and outcomes.

Through a series of observations, the cardiac care team identified 25 points of risk for the patient, in addition to steps that wasted time and delayed contact with the waiting family. The cardiac and operating room staff then developed a structured and consistent process to transition patients safely between services. Through their efforts, the team reduced points of risk to patients from 25 to eight, and time to settle a patient from 1.5 hours to less than 1 hour in 85 per cent of cases.

The new process now brings all members of the team around the patient bed to hear how the patient did during surgery and what to watch for in the coming hours. This eliminates missed information, allows the team to settle the patient comfortably and then share information quickly with waiting loved ones. The success of this work has led the team to recommend a similar process for other transition areas.

SURGERY SERVICES RELOCATED

In summer 2011, Surgical Services were relocated from the sixth floor, and other areas, to the second floor of the Hospital. Subsequently, work processes have been streamlined for efficiency and better use has been made of space.

The Day Surgery/Short Stay Unit is now responsible for admitting and preparing all patients for surgery at St-Boniface Hospital. They also recover all day surgery patients, provide postoperative care and prepare patients for discharge.

In August, surgical services moved to the second floor, where staff continue to recover the overnight elective patients, short stay acute care surgical patients, some diagnostic imaging prep and recovery patients, same day surgery and emergency slate patients.

These moves allow patients to be prepared for and recover from surgery in the same area, reducing the number of elevator trips and transfers they previously had to endure on the day of their surgery, ultimately, reducing risk to patients.

CARING FOR PATIENTS IN EMERGENCY

The Emergency Program has been actively working to reduce wait times for patients with minor illnesses. Many patients visiting the Emergency Program are not admitted to Hospital. These patients, however, can wait for extended periods of time for treatment as Emergency staff attends to patients requiring urgent care.

Staff is now looking at the flow of different groups of patients to determine how best to meet urgent needs, as well as those with less serious illnesses, in a timely manner. The staff has developed a system to standardize flow of information about the patient’s situation in the Electronic Patient Record. This triggers timely testing, diagnosis and discharge, effectively reducing Emergency wait times.
HOPE …
MURRAY AND JACQUELINE KILFOYLE BUILD A LEGACY OF INNOVATION THROUGH LEAN TRANSFORMATION

When Dr. Michel Tétreault, St-Boniface Hospital President & CEO, first presented the concept of Lean transformation to St-Boniface Hospital’s Board of Directors, Murray Kilfoyle was one of the biggest skeptics at the table. He didn’t believe that Dr. Tétreault’s vision to improve patient care by applying Lean business principles to day-to-day Hospital operations was possible.

Four years later, Murray is one of Lean transformation’s biggest advocates.

“It was a revelation to see how excited and energized the staff were,” says Murray. “It’s change at the grassroots level, and it works. These are smart people, and they see the opportunities for improvement through Lean.”

For nearly a decade, Murray has been using his expertise in business and finance to improve processes at St-Boniface Hospital through his volunteer role as a member of the Board of Directors.

“You do not have to be a great fundraiser or Saint Marguerite d’Youville to make a difference,” says Murray. “Everyone can make a valuable contribution by transferring their work skills to any number of volunteer positions.”

In 2011, Murray was recognized with the 2011 Investors Group President’s Lifetime Volunteer Achievement Award for his commitment to volunteering. This award is presented annually along with a $10,000 donation to the recipient’s charity of choice.

Murray and his wife Jacqueline chose to match this donation and direct these funds to St-Boniface Hospital Foundation. The initial donation of $20,000 established the Jacqueline and Murray Kilfoyle Endowment Fund, in support of excellence in health care delivery at St-Boniface Hospital, including process improvements through Lean transformation.

In lieu of a gift for Murray’s retirement from his role as Senior Vice President of Finance for Investors Group in 2011, Murray asked friends and colleagues to make donations to the endowment fund.

“The Hospital is a place where miracles are delivered every day. Many people work very hard under challenging circumstances to deliver on the Grey Nuns’ mission of hope and healing,” says Murray. “I am grateful for the opportunity to contribute to making that mission a reality.”

The endowment fund continues to grow, and has become a lasting legacy of the things that matter most to Jacqueline and Murray – providing the best possible health care to those in need. This fund will have a profound impact that will benefit patients, families and physicians for generations to come.

“We want to see more efficient and effective health care delivery processes. If you improve the processes, you will improve the care,” says Murray. “My hope is that others will look at our story and it will inspire them to invest their money in Lean transformation.”

“It’s change at the grassroots level, and it works.”
HEALING ...

BUHLER ART GALLERY REMAINS OASIS OF CONTEMPLATION AND REJUVENATION

It will be five years in September 2012, since the Buhler Gallery first opened its doors, thanks to a very generous gift from John and Bonnie Buhler.

Since 2007, the Buhler Gallery has been an oasis of hope and healing for St-Boniface Hospital staff, patients, families and the community-at-large, as well as a venue for local and national artists to showcase their work.

In 2011, the Gallery exhibited Open-Ended Narratives: William Pura, E.J. Howorth & Derek Brueckner from January to May; Engaging Connections: Margruite Krahn, Ingrid McMillan & Alan McTavish from June until October; and Quilts: Past & Present, from October 2011 to January 2012.

The 1,400-square-foot Buhler Gallery is located in the Hospital’s historic former entrance, built in 1914, and is accessible to patients and the public through the Everett Atrium, weekdays from 10 a.m. to 8 p.m. and weekends from noon to 4 p.m.

The Gallery continues to grow thanks to ongoing support from donors, and Buhler Gallery Members. Annual membership fees are only $15 and help the Gallery provide new and interesting art exhibits and programming to its thousands of annual visitors. To learn more about how you can support the Buhler Gallery, contact St-Boniface Hospital Foundation at info@stbhf.org.

HEALING ...

ST-BONIFACE HOSPITAL FOUNDATION RAISES $535,000 FOR MENTAL HEALTH PROGRAM

Mental illness affects us all, be it personally or indirectly through friends or family.

St-Boniface Hospital has been offering compassionate mental health care since it first opened its doors. In 1978, the Hospital began offering dedicated mental health inpatient and outpatient services from the McEwen Building.

On February 2, 2011, St-Boniface Hospital Foundation announced the launch of its Mental Health Campaign. With a $535,000 fundraising goal, the Campaign aimed to improve mental health services for Manitobans through renovations to the McEwen Building and the purchase of state-of-the-art medical equipment for the Mental Health Program. The renovations and new equipment will put St-Boniface Hospital at the forefront of mental health care services, providing cutting-edge treatment for depression and anxiety disorders.

Thanks to the support of the community, and donors like you, St-Boniface Hospital Foundation met its fundraising goal, and renovations are now underway.

“Access to new and innovative technology and treatments allows us to provide the absolute best possible care to our patients,” says Dr. Murray Enns, Clinical Director, Mental Health Program, St-Boniface Hospital, and Director of Mental Health for the Winnipeg Regional Health Authority. “On behalf of everyone at St-Boniface Hospital’s Mental Health Program, thank you for helping us reach this goal.”

Funds raised will bring innovative new medical technology to Manitoba
Since St-Boniface Hospital Research was established in 1987, St-Boniface Hospital Foundation has granted millions to support innovations in medical research, including an initial $19 million grant to establish the Research Centre.

“Thanks to the support of St-Boniface Hospital Foundation donors, St-Boniface Hospital Research has earned an international reputation as a leader in medical research,” says Dr. Grant Pierce, Executive Director of Research, St-Boniface Hospital. “Donor support ensures that we are able to recruit some of the best researchers from around the world to our facility.”

With the support of donors like you, we are bringing innovations in care to those who matter most – your loved ones.

Here is a snapshot of some of the incredible work currently taking place at St-Boniface Hospital thanks to your support.

Dr. Chris Anderson
Principal Investigator, Division of Neurodegenerative Disorders
Glial Biology Laboratory

Central nervous system glial cells, also known as astro-glial cells or astrocytes, have been viewed predominantly as support cells for neurons that do not participate in vital brain functions. However, in the past 10 years, this has been shown to be far from the truth. Dr. Anderson’s laboratory investigates the role of astrocytes in neuronal loss typically found in central nervous system disorders, including stroke, seizure, Alzheimer’s disease and ALS.

Dr. Hope Anderson
Principal Investigator, Canadian Centre for Agri-food Research in Health and Medicine
Vascular Biology Laboratory

There is a growing emphasis in the medical community on using dietary modification as a means to prevent cardiovascular disease. Dr. Anderson’s lab is looking at the complex interaction between diet and body function. The goal of this research is to identify new nutritional therapies that prevent or slow the onset of heart failure.
Several diseases have been linked to diet, and research studying the health effects of various foods has the potential to impact many lives. Dr. Blewett’s lab is exploring the effects of food products on immune function in people who suffer from chronic diseases, such as cardiovascular disease and diabetes. She is currently exploring the effect of zinc deficiency on T-cell maturation and function.

Diabetes is one of the fastest growing chronic diseases. According to the Canadian Diabetes Association, more than three million Canadians are currently living with diabetes. Four out of five deaths in the diabetic population can be attributed to cardiovascular disease, as diabetes impairs the heart’s ability to pump blood effectively. Physical activity is very important in maintaining good health, and Dr. Duhamel’s laboratory is investigating the benefits of exercise in improving cardiovascular function in patients with Type 2 diabetes.

When someone has a heart attack, the death of heart cells impairs the heart’s ability to pump blood. This causes the remaining heart cells to work harder to compensate for the cells that have died. Over time, this excessive workload eventually causes the heart’s ability to pump blood to decrease, resulting in heart failure. Dr. Kirshenbaum’s laboratory is trying to understand the underlying events that cause heart cells to die during heart disease.

Canadians typically consume a diet high in n-6 fatty acids, and low in n-3 fatty acids, which could be contributing to an increase in cardiovascular disease and cancer. Dr. Moghadasi’s laboratory is investigating whether an increase in n-3 fatty acids, typically found in fish oil or flaxseed oil, will reduce the risk of cardiovascular disease by decreasing inflammation and improving heart beat rhythms.

Seventeen per cent of Canadians smoke, and these individuals are at an increased risk of more than two dozen smoking related diseases and conditions. Dr. Schultz is working in the areas of tobacco control and cancer prevention. Her research focus includes: the enactment of smoke free grounds policies in acute settings, household context and youth susceptibility to begin smoking, and health equity and social justice issues within tobacco control initiatives.

Despite significant developments in cardiac care and treatment, many patients who survive a heart attack will subsequently go into heart failure, potentially due to the mishandling of oxygen in the body. When oxygen is improperly handled within a cell, free radicals are created – a new, toxic species that can wreak havoc when the body’s natural defenses are lowered. Dr. Singal’s laboratory is investigating how various antioxidants have the potential to prevent or treat the damage associated with free radical induced oxidative stress.
$1 MILLION LEGACY CREATES OPPORTUNITIES FOR ALZHEIMER’S DISEASE RESEARCH

Thanks to a $1 million donation from the Everett family in 2009, St-Boniface Hospital is leading the way in Alzheimer’s disease research. Dr. Benedict Albensi, Principal Investigator, Synaptic Plasticity and Cellular Memory Dysfunction, and his team are breaking ground in neurodegenerative research. They will continue to do so, thanks to the annual funding they receive from “The Honourable Douglas & Patricia Everett and Royal Canadian Properties Limited Endowment Fund.”

“There are many ways to establish a lasting legacy,” says Dr. Grant Pierce, Executive Director of Research, St-Boniface Hospital. “This generous donation from the Everett family is allowing us to expand our research each year, diving deeper into the root causes of neurodegenerative disorders.”

The Everetts are strong supporters of medical research and St-Boniface Hospital. Horace Everett, Senator Douglas Everett’s father and founder of Dominion Motors, first became involved with the Hospital in 1949 when he was named Chairman of the Advisory Board, overseeing fundraising activities for the first Hospital expansion. Doug joined the fundraising committee during this time and also participated in the hallmark expansion. The Hospital remained close to the Everetts’ hearts over the years as family members received care within the walls they had helped build.

INNOVATIONS IN RESEARCH

Dr. Albensi’s lab is focused on understanding the basic function of memory and what happens to the brain when memory is impaired. He and his team are examining neurochemical factors, attempting to identify molecular signaling pathways, and neuropharmacological mechanisms that could be targeted with promising therapeutics.

One molecule that Dr. Albensi believes plays an important role in memory is nuclear factor kappa-B (NF-κB), a protein found in animal cells that controls the transcription of DNA. This protein has already been studied in its relation to cancer, inflammation and brain injury. Only recently has it been linked to memory by Dr. Albensi’s research, and only a handful of research laboratories in the world are looking at how this protein relates to memory disorders. This protein also appears to regulate molecules that are important for memory and neuroprotection.

“One next step in our research is to see how we can alter diet in animals and then humans to determine if we can improve memory,” says Dr. Albensi.

Dr. Albensi’s team is proposing a clinical trial using an elderly patient population with Alzheimer’s disease and creatine supplements. The study will examine whether or not the supplement, already known to contribute to muscle health, can also improve memory.

“It’s very encouraging that Manitobans support research,” says Dr. Albensi, who moved to the province from Cleveland over six years ago. “I see the support very directly and it makes a big difference in the quality and quantity of research we are able to do.”
ST-BONIFACE HOSPITAL OPENS NEW CARDIAC CENTRE OF EXCELLENCE

On April 4, 2011, St-Boniface Hospital, along with Premier Greg Selinger, proudly unveiled the new home of the Winnipeg Regional Health Authority’s Cardiac Sciences Program at the I.H. Asper Clinical Research Institute. The $40.3 million state-of-the-art facility began receiving cardiac patients later that month.

“As patients, families and staff will benefit enormously from this facility,” says Premier Selinger. “This new leading-edge, modern cardiac centre of excellence will support our cardiac specialists in providing first-class quality care to Manitobans when they need it, while also providing more space for patient and family privacy, state-of-the-art medical equipment and appropriate space for staff.”

St-Boniface Hospital Foundation raised an incredible $25 million in 2004 through its HeartCare Campaign. These funds were used to build the I.H. Asper Clinical Research Institute – the infrastructure necessary to house the new 41,000 square-foot home of the Cardiac Sciences Program.

The new cardiac centre of excellence adds more capacity to meet the need for cardiac care in Manitoba, and will help to ensure Manitobans receive cardiac surgery within the medically recommended benchmark. A recent analysis by the Canadian Institute for Health Information found that 99 per cent of patients in Manitoba received surgery within established benchmarks.

“Continued support from the community allows the Foundation to support St-Boniface Hospital’s Cardiac Sciences Program team in performing their life changing work,” says Chuck LaFlèche, President & CEO, St-Boniface Hospital Foundation.

ASPER FAMILY LEGACY REALIZED

The late Izzy Asper strongly supported innovation in medical research and believed that Manitoba could be a leader in cardiac care. The Asper family’s $5 million donation to St-Boniface Hospital Foundation helped establish the I.H. Asper Clinical Research Institute, the foundation for what is today a centre for cardiac excellence.

“For many years St-Boniface Hospital has played a very special role in improving the lives of my family and countless others around the world. My father’s inspired vision of the importance of Manitoba-based health research led to our family’s major gift, through The Asper Foundation in 2002, to help establish the state-of-the-art I.H. Asper Clinical Research Institute,” says Gail Asper, President, Asper Foundation.

“Our family is very pleased that the Asper Institute is now being used as a leading edge cardiac care facility that is saving countless lives.”

The late Babs and Izzy Asper, pictured with Premier Gary Doer, at the official announcement of the Asper family donation to establish the I.H. Asper Clinical Research Institute, 2002.
The Winnipeg Regional Health Authority’s (WRHA) Cardiac Sciences Program has experienced significant growth and success since it was consolidated at St-Boniface Hospital in 2004. The program now provides the very best cardiac patient care to Manitobans, while also conducting world-renowned clinical research.

Dozens of internationally recognized clinician researchers and cardiac specialists have been recruited to St-Boniface Hospital since 2004.

The Winnipeg Regional Health Authority’s (WRHA) Cardiac Sciences Program has experienced significant growth and success since it was consolidated at St-Boniface Hospital in 2004. The program now provides the very best cardiac patient care to Manitobans, while also conducting world-renowned clinical research.

Dozens of internationally recognized clinician researchers and cardiac specialists have been recruited to St-Boniface Hospital since 2004.

We are grateful to everyone involved for making this all possible.”

One of the driving forces behind this growth is the Cardiovascular Health and Research in Manitoba (CHaRM) group. CHaRM provides a forum for discussion, promotion and collaboration for basic science, clinical outcomes and translational research in cardiac sciences.

This ultimately leads to better patient care, as many talented, young cardiac specialists seek opportunities to practice both clinically and in the laboratory. Foundation funds have made this collaboration possible by providing the seed money needed to establish three CHaRM laboratories at St-Boniface Hospital, hire technologists, students and research support staff, and create a heart failure database.

“We look forward to building upon this success and continuing to deliver excellent patient-centered cardiac care, research and education,” says Dr. Alan Menkis, Medical Director, Cardiac Sciences Program and Chairman, CHaRM. “We are grateful to our donors, cardiac patients, their families, physicians, staff members, researchers and partners for making this all possible.”

Here is snapshot of some of the incredible clinical cardiac research currently taking place at St-Boniface Hospital, and some of the talented men and women who are balancing their time between patient care and the lab.
DR. RAKESH C. ARORA

Heart Failure Therapy

Congestive heart failure affects more than 350,000 Canadians. It is one of the most common reasons for hospitalization. Dr. Rakesh Arora’s lab is examining the role of cell implantation from other tissue sources into damaged heart muscles in the hopes of replacing lost myocardial cells and regaining heart function. This research includes: the best methods of delivering cells to patients, and at what point/time after heart injury should this implantation take place. Outside of the lab, Dr. Arora is the first cardiac surgeon in Canada to have also completed a fellowship in Critical Care Medicine.

DR. DARREN FREED

Regenerative Cardiology

The primary aim of Dr. Darren Freed’s research is to identify innovative therapeutic options for the treatment of advanced heart failure, with a particular emphasis on the cellular mechanisms of cardiac wound healing and repair using stem cells, and improving cardiac transplantation by optimizing donor hearts. His diverse training as a cardiac surgeon, with a PhD in physiology, advanced surgical training in heart failure, including cardiac transplantation, and current appointment as Head of the Surgical Heart Failure Program within the WRHA Cardiac Sciences Program, provides a unique opportunity to take clinically relevant problems to the basic science laboratory and take solutions back to the clinic.

DR. HILARY P. GROCOTT

Cardiac Surgery and Anesthesiology

Dr. Hilary Grocott is a practicing anesthesiologist who spends 50 per cent of his time in the operating room, caring for patients undergoing cardiac surgery, and half of his time in the lab. His research focuses on the impact of cardiopulmonary bypass (CPB) on the brain, but has also examined other adverse outcomes associated with cardiac surgery. This work has included extensive research into the mechanisms of cardiac surgery-associated cerebral injury, as well as insights into neuro-protective mechanisms. In active collaboration with biopharmaceutical and other biotechnical interests, Dr. Grocott is a frequent consultant to industry.

DR. DAVINDER JASSAL

Cardiovascular Imaging

Dr. Davinder Jassal’s research focuses on the complementary use of multimodality cardiovascular imaging in the noninvasive assessment of heart failure syndromes. Dr. Jassal uses a combination of echocardiography (ultrasound of the heart), cardiac CT (computed tomography) and CMR (cardiac MRI). His lab is dedicated to translational research focusing on four heart failure models: Herceptin and heart failure, metabolic syndrome and heart failure, marathon running and heart failure, and cardiac hemodynamic imaging and remodeling in pregnancy. Outside of the lab, Dr. Jassal is a practicing Cardiologist who sees patients through the Bergen Cardiac Care Centre at St-Boniface Hospital.

DR. RIZWAN MANJI

Cardiac Surgery and Critical Care Patients

Dr. Rizwan Manji is a Cardiac Surgeon, an Intensivist, and Co-Director of the Cardiac Intensive Care Unit at St-Boniface Hospital. His clinical research looks at cardiac surgery and critical care patients. Areas being examined include: outcomes of elderly patients post cardiac surgery, outcome changes over time in cardiac surgery patients, effect of wait times for cardiac surgery, staffing models for critical care, seizure post cardiac surgery, and extra-corporeal support for patients with respiratory failure. These and future studies will help guide clinicians in the care of their patients, as well as administrators in how to best use health care resources.

DR. SHELLEY ZIEROTH

Heart Failure Clinic

Cardiologist Dr. Shelley Zieroith is Head of St-Boniface Hospital’s Heart Failure and Transplant Clinic, and Head of the Medical Heart Failure Program. Medical device studies for cardiac resynchronization therapy and heart failure related devices are underway. Further studies have been proposed in the end-stage heart failure patient population, as well as studies involving nutraceutical agents. Local cardiac transplant patients are now participating in their first national multicenter trial exploring biomarkers in cardiac transplant.
HOPE . . .
LEGACY OF HOPE MEMBER CREATES TRIBUTE TO FAMILY

Kathleen Huycke was born at St-Boniface Hospital on October 23, 1949. Her aunt, nurse Katherine Doyle, was the first to notice that Kathleen was fighting for her life, following a long and difficult delivery. Katherine immediately called her brother, Dr. Pat Doyle.

"People thought I was going to be badly brain damaged," says Kathleen. "I credit my uncle and the rest of the team at St-Boniface Hospital for doing as much as they could to control the damage."

Diagnosed at birth with cerebral palsy, Kathleen’s life has been filled with unique challenges. But today, she is a healthy and vibrant woman in her early 60s.

"My parents never made a big deal of my disability, so I grew up not even realizing that I was different," says Kathleen. "The only thing that I was not allowed to do was roller skate."

Kathleen likens cerebral palsy to having a stroke, which occurs in infants rather than adults. Symptoms include tight muscles, an abnormal walk, joint contracture and speech, hearing and vision problems.

"Nothing I do is automatic. I have to think before I speak, move or do anything you may take for granted," she says. "It can be tiring, but I have quick reflexes and my thinking process is fine, so I cannot complain."

In spite of her disability, Kathleen worked as a teacher for more than 25 years, was a Town Councillor in The Pas for nine years, travelled extensively with her late-husband, Brian, and has generally lived life to the fullest.

Kathleen and Brian met in The Pas, Manitoba. Brian was a social worker from Eastern Canada who was stationed in The Pas, and she was a Winnipeg teacher living and working in Moose Lake.

"I saw him six times in a six week period. We were married within six months," she says. "We had 38 very happy years together."

The Huyckes worked hard, invested well and enjoyed the fruits of their labour.

"We were very fortunate that we were able to take early retirement. I haven’t worked since I was 48," says Kathleen, who taught for 30 years.

Brian passed away suddenly in 2009. Life without her husband meant many adjustments and big decisions, especially when it came to sorting through his estate and their joint finances.

"His death really had a ripple effect on my life," she says. "It was a relief, having already discussed leaving our estate to St-Boniface Hospital Foundation, it was one decision that I didn’t have to make after Brian’s death."

In 2010, Kathleen made an appointment with St-Boniface Hospital Foundation’s Development Manager to discuss ways that she could leave a legacy for her and Brian at the Hospital that had meant so much to them during their lives.

"It was something that we had to talk about. We had no immediate family to leave our estate. My extended family, the Doyles, had many ties to St-Boniface Hospital. For me, leaving our estate to the Hospital is a tribute to my family," says Kathleen.

"Having lived with a medical condition, my husband and I had always wanted to help a medical student reach his or her goals. Leaving a bequest to St-Boniface Hospital Foundation allows us to help health care providers take care of their patients for generations to come."

To learn how you can leave your legacy at St-Boniface Hospital and join the Legacy of Hope, visit www.saintboniface.ca.
Some of St-Boniface Hospital Foundation’s most loyal donors are former St-Boniface Hospital patients who have decided to give back to the Hospital in honour of the great care they received.

In October 2011, St-Boniface Hospital Foundation proudly launched its Circle of Compassionate Care program, providing grateful patients, families and friends with a special way to recognize St-Boniface Hospital staff who have provided exceptional care.

Past St-Boniface Hospital patients were invited to join the Circle of Compassionate Care by expressing their gratitude to the physicians, nurses, health care providers, volunteers or staff members who played a special part during their time at St-Boniface Hospital.

When past patients make a donation to St-Boniface Hospital Foundation’s Circle of Compassionate Care, the individual(s) designated are sent a personalized card with the message of thanks.

Many grateful patients, families and friends have already made a donation and recognized outstanding caregivers through the Circle of Compassionate Care program.

Here are some of the great stories of compassion we have received:

“Wow! I was impressed by how all the heart surgery team members (so many!) made the patient (me) feel welcome, safe and informed. They responded expediently, but kindly, during my healing. Plus, follow-up calls to my home after the operation. The coordination and cooperation of so many professionals was amazing! You saved my life!”

E. Stockmann

“Thanks for being the kind of person who made a difference in my world. Forget injuries, never forget kindness.”

Susanne Abi-Saleh

“From a diabetes patient: thank you for being there for me. You made a devastating challenge very manageable.”

Barb Kelly
It has been three years since Variety, The Children’s Charity of Manitoba, committed $120,000 to fund the St-Boniface Hospital Therapeutic Clown Program for ten years. Today, the therapeutic clowns are still bringing smiles to the faces of children, and are finding new ways to incorporate laughter into pediatric patient care.

“I have watched children make real progress overcoming disabilities while playing with the clowns. They also help the kids relax, which makes it easier to do tests and administer shots,” says Mihalchuk. “We are able to do our jobs better thanks to the clowns.”

Darlene Mihalchuk, Coordinator of St-Boniface Hospital’s ACF Pediatric Outpatient Clinic, says the program has a real therapeutic component to it.

Wayne Rogers, Executive Director of Variety, The Children’s Charity of Manitoba, learned of the need for program funding from a friend who saw a call for support on the news in May 2009.

“This program is so important. I talk about it all the time,” says Rogers. “You can make a difference in children’s lives if you can add some sunshine, and that’s exactly what the therapeutic clowns do.”

Variety now fundraises for the program at its annual Gold Heart Gala, where it invites organizations and individuals to sponsor a “Clown of the Month.”

Variety has been working with St-Boniface Hospital Foundation to improve care for sick kids since the 1980s, when Variety purchased equipment for the Hospital’s Pediatric Outreach Program.

“We’re honoured to continue to partner with St-Boniface Hospital Foundation to put smiles on the faces of children across the province,” says Rogers.

To learn how you can support the Variety, Children’s Therapeutic Clown Program at St-Boniface Hospital, visit www.saintboniface.ca.
Every year during the holiday season, employees at L.V. Control Manufacturing Ltd. make a donation to a local charity. Since several company employees and their family members have been impacted by heart disease, L.V. Control decided to donate funds raised in 2011 to St-Boniface Hospital Foundation to help support cardiac research initiatives.

L.V. Control chose to direct their funds to the research of Dr. Larry Hryshko, a Principal Investigator in the Institute of Cardiovascular Sciences at St-Boniface Hospital. Dr. Hryshko’s lab investigates cardiac electrophysiology.

L.V. Control challenged its employees to make a donation to St-Boniface Hospital Foundation, and offered to match every donation made by its employees. On December 16, 2011, Gaétan Morais, Director of Finance and Administration at L.V. Control Manufacturing Ltd., presented a cheque for $6,000 to St-Boniface Hospital Foundation. These funds will help Dr. Hryshko continue his important, potentially life-saving research.

To learn more about how employers can support their employees’ philanthropic efforts, visit www.stboniface.ca.
HEALING ...
ONE STROKE AT A TIME

RESEARCHERS RAISE FUNDS FOR ST-BONIFACE HOSPITAL FOUNDATION

St-Boniface Hospital Researchers are not only conducting life changing medical research, they are also fundraising for it!

The St-Boniface Hospital Research Social Committee has been holding Stroke for Stroke, an annual fundraising golf tournament in support of research activities at St-Boniface Hospital since 2002. The event is true to its name, asking participants to pledge money for every stroke they take during the tournament. The amount pledged per stroke is predetermined by each team prior to the tournament’s start and team scores are multiplied by the individual pledges at the end of the game.

The tournament has grown considerably since it was created. In its first year, Stroke for Stroke had 30 participants and raised $600. In 2011, 72 St-Boniface Hospital Research students, staff and suppliers participated in the tournament, which raised $1,200, bringing the tournament’s nine year fundraising total to $15,000!

“We want to give back to the community that has been supporting our research work,” says Alex Austria, Stroke for Stroke Coordinator. “This is our way of saying ‘thank you’ to St-Boniface Hospital Foundation for its ongoing support.”

Stroke for Stroke is made possible thanks to the support of its sponsors and partners, including VWR International.

HOPE ...
FOR PREMATURE INFANTS AND THEIR FAMILIES

FORD FAMILY USES CREATIVE FUNDRAISING IDEAS TO RAISE MONEY FOR NICU ISOLET

Since losing their son Zdeno, Ryan and Corrie Ford, and their daughter Stella, have committed themselves to helping other premature babies and their families.

Six months into her pregnancy, Corrie’s placenta ruptured, putting both her own life, and her baby’s life, in jeopardy. The Ford family rushed from their home in Neepawa to Brandon, where Zdeno was born on July 12, 2011, at just 24 weeks. He weighed a mere one pound and 12 ounces. Soon after birth, Zdeno was transferred to St-Boniface Hospital, where the Neonatal Intensive Care Unit (NICU) team worked hard to try to save him. Sadly, three weeks later, on August 2, Zdeno passed away.

This experience motivated the Ford family to do everything they can to make sure that other premature babies and their families receive the absolute best care and best chance at life. This means having access to the best technology available. The Ford family has set a fundraising goal of $30,000 to purchase an incubator for the NICU.

The Fords wrote a children’s book titled “Stella Finds a Bed for Zedo,” in which a young girl befriends a sick frog and sets out to raise money to purchase a special bed for him. The book is available for purchase for $15 at locations in Neepawa, Brandon and Winnipeg – including St-Boniface Hospital. The Ford family is also selling “Stella Finds a Bed for Zedo” merchandise, including baby and children’s clothes, hats and pens.

Donations to the Stella Finds a Bed for Zedo fund are accepted at 12 donation drop box locations across Neepawa, and the family has done additional fundraising at bake sales and barbecues in their home town.

As of December 31, 2011, the Ford family had raised $10,872. In 2012, they will build on this success with new events and activities. To learn more, visit www.stellafindsabedforzedo.ca.
A SWEET SUCCESS

On June 9, 2011, St-Boniface Hospital Foundation held its 8th annual La Soirée chocolatée at the Théâtre Cercle Molière in the heart of St. Boniface.

More than 170 guests gathered for this unique event, and enjoyed delicious food prepared by the chefs at WOW! Hospitality Concepts, as well as fine wines and signature martinis. For la pièce de résistance – guests had variety of 15 decadent chocolate desserts to choose from!

Winnipeg’s own Jonathan Toews, captain of the Chicago Blackhawks, contributed a special prize to La Soirée chocolatée’s live auction – a flight to Chicago to watch the Blackhawks in action, as well as the opportunity to meet with Jonathan in the family room after the game!

Thanks to the support of the community, La Soirée chocolatée was a great success, raising $90,000 for St-Boniface Hospital!

The 2012 La Soirée chocolatée will take place on Thursday, June 7, at Théâtre Cercle Molière. For more information on La Soirée chocolatée, please visit www.saintboniface.ca.

A special thank you to the 2011 La Soirée chocolatée event Committee, and Committee Chair, Brigitte Léger, for their outstanding efforts in helping to make this year’s event a great success.
CELEBRATING HOPE AND HEALING ... 

HISTORY OF THE INTERNATIONAL AWARD

Under the direction of former St-Boniface Hospital Foundation Chairman Samuel Cohen, the International Award was established in 1976 to honour individuals whose genius, talent, and energy have made an outstanding contribution to health care and/or humanity. Proceeds raised through the International Award Dinner are directly applied to medical research and patient care at St-Boniface Hospital.

PAST INTERNATIONAL AWARD RECIPIENTS

1976 - Dr. Jonas Salk
1977 - Dr. Christiaan Barnard
1978 - Prince Philip
1979 - Rosalynn Carter
1980 - Dr. Alvin Mauer and Danny Thomas
1981 - Jehan el Sadat
1982 - Mother Teresa of Calcutta
1983 - Professor Henry G. Friesen, Professor Lyonel G. Israels, Professor Frank S. LaBella, and Professor Alec H. Sehon
1984 - Pope John Paul II
1985 - Medical Research Council of Canada

The first recipient of the International Award was Dr. Jonas Salk, a world-renowned microbiologist who developed the first vaccine effective against polio. Since its inception, 19 International Award Dinners have been held in recognition of 24 esteemed recipients including a prince, a Nobel Peace Prize winner, knights, humanitarians, professors, researchers, a pope and most recently, a world-renowned professional athlete.
HOPE …

CHILDREN’S CHAMPION STEVE NASH HONoured WITH 2011 INTERNATIONAL AWARD

On September 12, two-time National Basketball Association Most Valuable Player and children’s champion, Steve Nash, received St-Boniface Hospital Foundation’s prestigious 2011 International Award.

Nash takes his role as a community leader very seriously. In 2001, he established the Steve Nash Foundation to assist underserved children in their health, personal development and education. The Foundation works to improve circumstances and create opportunities for children living in poverty, or with illness, abuse or neglect. The Steve Nash Foundation also works to provide thoughtful solutions to critical community needs, such as health care, the environment and educational activities.

Nash began his day in Winnipeg with a tour of St-Boniface Hospital Research, led by Dr. Grant Pierce, Executive Director of Research at St-Boniface Hospital. During the tour, Nash learned about innovative medical research taking place at the Hospital, thanks to donors like you!

Nash received the 2011 International Award at a sold-out gala dinner held in his honour at the MTS Centre. Over 900 people attended the dinner, which raised more than $250,000 for St-Boniface Hospital. Thank you to everyone who played a part in making the International Award Dinner a huge success! Funds raised through International Award Dinners support life changing patient care and medical research at St-Boniface Hospital.

THANK YOU TO OUR SPONSORS!

A special thank you to the 2011 International Award Event Committee, and Committee Chair, Doug Stephen, for their hard work and commitment to making the event a huge success.

Broadcasting live from St-Boniface Hospital’s Everett Atrium, the day-long radio program featured a non-stop lineup of patients, donors and St-Boniface Hospital health care providers who shared their stories of hope and healing with CJOB listeners throughout the day.

“Raising more than $100,000 for St-Boniface Hospital in a single day is a great achievement!”

A special thank you to Premier Greg Selinger and Mayor Sam Katz for attending, and to pro-golfer Adam Speirs and Mick E. Moose who were on site to accept donations and greet Hospital staff and visitors.

Thanks to the support of donors, sponsors, volunteers and community leaders, St-Boniface Hospital Foundation’s 2011 Radiothon of Hope and Healing raised an incredible $102,416!

“We are thrilled with the response we received from the community,” says Chuck LaFlèche, President & CEO, St-Boniface Hospital Foundation. “Raising more than $100,000 for St-Boniface Hospital in a single day is a great achievement!”

Funds raised during the Radiothon will help support vital patient care initiatives and world-class medical research at St-Boniface Hospital.

The 2012 Radiothon of Hope and Healing will take place on Sunday, November 4. For more information, please visit www.saintboniface.ca.

Thank you also to all of our gift-in-kind and entertainment sponsors!

Special thanks to event Chair, Brenlee Carrington, for her continued dedication to our cause and the success of our Radiothon.
SHARING STORIES OF Hope and Healing …

THE HEALTH REPORT CELEBRATES FIVE YEARS ON AIR

The Health Report, a weekly production of St-Boniface Hospital Foundation, has been bringing stories of hope, healing and innovation to Manitoba airwaves for five years.

In September 2011, the one-hour talk radio show began its fifth season on CJOB 68, Manitoba’s most listened to radio station. The Health Report has quickly established itself as one of CJOB’s most popular programs, with more than 11,000 dedicated fans tuning in each week to hear hosts Chuck LaFlèche and Greg Mackling talk to some of the province’s leading medical experts.

“The Health Report has become a cornerstone of CJOB’s Sunday programming. Every Sunday, from 11 a.m. to noon, more and more Manitobans are tuning in to get their weekly dose of medical information,” says Kevin Wallace, CJOB Program Director.

Each season, the Health Report features a wide variety of guests from St-Boniface Hospital and St-Boniface Hospital Research. Topics include breakthroughs in medical research, advancements in patient care, and personal stories from staff, patients and donors.

For a summary of past guests, to listen to past episodes or to see what’s coming up on the Health Report, visit www.thehealthreport.ca.

ST-BONIFACE HOSPITAL FOUNDATION AND CTV LAUNCH MODERN MEDICINE

St-Boniface Hospital Foundation has a new way to share stories with donors, supporters and the community-at-large. In October 2011, the Foundation partnered with CTV to create Modern Medicine, a monthly news feature dedicated to highlighting research and patient care innovations at St-Boniface Hospital and St-Boniface Hospital Research.

Modern Medicine airs on CTV noon hour and evening news on the second Thursday of every month. Maralee Caruso, CTV news anchor, hosts the segments, which can be viewed online at www.saintboniface.ca.

“We are very proud to partner with CTV to share St-Boniface Hospital Foundation news with Manitobans,” says Chuck LaFlèche, President & CEO, St-Boniface Hospital Foundation. “There are so many wonderful stories and we are very excited to be able to tell them in this way.”

ST-BONIFACE HOSPITAL FOUNDATION | ANNUAL REPORT 2011
As a registered, not-for-profit charity, St-Boniface Hospital Foundation relies on the support of its donors – individuals, families, corporations and organizations – to make hope and healing possible at St-Boniface Hospital.

Over the past 40 years, you have helped us raise more than $160 million – money that has helped bring countless innovations and medical miracles to Manitoba.

As the primary fundraising body for St-Boniface Hospital and St-Boniface Hospital Research since 1971, we are committed to raising funds in our community to support patient care and medical research. Your support has made it possible to:

- Establish and fund St-Boniface Hospital Research for 25 years!
- Fund the development and expansion of patient care programs such as Cardiac Sciences, Woman and Child and Palliative Care.
- Purchase cutting-edge medical equipment to aid in the diagnosis and treatment of disease, such as ultrasounds, MRIs and neonatal incubators.
- Educate the next generation of research technicians and medical specialists through awards and educational grants.
- Build the infrastructure necessary to house important patient care programs, such as the I.H. Asper Clinical Research Institute, the Bergen Cardiac Care Centre and the Andrei Sakharov MRI Centre.

Thank you for making 40 years of hope and healing possible at St-Boniface Hospital. With your support, we look forward to the next 40 years!

SUPPORTING HOPE AND HEALING … FOR MORE THAN 20 YEARS!

Of the 867 donors acknowledged on the following pages for their 2011 contributions, 285 have been donating to St-Boniface Hospital Foundation for 20 or more years!

These individuals are recognized annually at our Spring Appreciation Breakfast, where those joining the list of 20+ year donors are acknowledged with a special pin. In 2011, 165 individuals joined this ever-growing list.
Thanks to donors like you, my daughter can now breathe on her own.

Stephanie Szmerski

● Donors who support St-Boniface Hospital Foundation as Monthly Donors ($250+ giving)
▲ Donors who have been supporting St-Boniface Hospital Foundation for more than 20 years
▲ Donors who have been supporting St-Boniface Hospital Foundation at a Leadership Lifetime Giving level
Your donations to St-Boniface Hospital Foundation kept me alive when my own heart could not.

Kristin Millar

LEADERSHIP LIFETIME GIVING

In appreciation of their generous support, we recognize the following Leadership Donors, who have donated more than $10,000 to St-Boniface Hospital Foundation cumulatively, as of December 2011. Advancements to further hope and healing through medical research and patient care are a direct result of the generosity of our donors. Thank you!
